FEATURING:

- SureStart® Silicon Nitride Igniter

FEATURING:

- Premium Indoor Comfort

Enjoy Just-Right Warmth with the Amana® Brand AMH95 Furnace

With your new Amana brand AMH95 Two-Stage Gas Valve, Multi-Speed Furnace with TwinComfort™ Technology, you can enjoy indoor comfort that is not too hot, and not too cold—it's just right. Thanks to our Twin-Comfort Technology, your

AMH95 performs like two furnaces in one: an energy-efficient, low-stage furnace for moderately cold days, and a heavy-duty, high-stage furnace for extremely cold ones. Plus, your AMH95 furnace will provide pleasant, even heating instead of the harsh, stop-and-go temperature swings of many single-stage furnaces.

Best of all, your AMH95 furnace will do all of this at up to a 95% AFUE efficiency level—which can help reduce the size of your utility bills, as compared to lower AFUE furnaces. And like all of our Amana brand products, it's designed to last and last and last!

TwinComfort™ Two-Stage Heating Performance for Maximum Comfort

Our new TwinComfort Technology enhances the comfort of your home by delivering just the right amount of heat to provide steady, even warmth. Unlike conventional, single-stage furnace technology, TwinComfort technology uses two heating stages. Your furnace starts out on the low stage, enabling a gradual increase in the temperature of your home environment. And if low-stage heating doesn't warm your home to the desired temperature quickly enough, TwinComfort shifts your furnace into the high stage automatically to ensure your comfort.

In addition to providing smooth, even heating, the AMH95 will typically run more quietly than single-stage furnaces. The AMH95 helps to reduce stagnant pockets of air that can form when the furnace stops running. Plus, the number of times the air in your home goes through your air filtration system can increase, providing yet another benefit of TwinComfort technology: improved air quality.

SureStart® Ignition System for Dependable Start-ups

Our SureStart® Ignition System, another critical component, uses a rugged Silicon Nitride igniter.

High-Efficiency Performance for Lower Utility Bills

A furnace's efficiency is indicated by two factors: its AFUE rating (Annual Fuel Utilization Efficiency), which indicates what percentage of each dollar of natural gas purchased is actually used to heat your home, and the type of blower used in the furnace. And since the high-efficiency blower in your furnace works year-round to circulate the air in your house (yes – even when the air conditioner is running), this results in real savings.

Your Amana brand AMH95 Furnace offers up to 95% AFUE, meeting the stringent requirements of the Environmental Protection Agency's Energy Star Program. **

Designed for Quiet Operation

With your Amana brand AMH95 Two-Stage Gas Valve Furnace, you can say goodbye to the rude awakenings that may occur with a noisy furnace. Because your AMH95 furnace typically operates in low stage the majority of the time, it produces less of the normal high-fire sound produced by single-stage furnaces. And to make your AMH95 even quieter, we fully insulate the furnace cabinet.

Rugged Construction that is Built to Last

Your Amana brand AMH95 Furnace's cabinet is built using high-quality, leather grain-textured, post-painted steel to resist rust and corrosion. Its elegant design and attractive two-tone Architectural Gray and Executive Gray color scheme complement other Amana brand heating and cooling equipment. And if you choose to add on to your system, the furnace has terminals for both an electronic air cleaner and a humidifier.

** ENERGY STAR ratings are dependent upon conditions beyond equipment installation. To make certain your HVAC equipment qualifies for the ENERGY STAR designation, get complete information at www.energystar.gov.
